Chapter 1

<i>A few words about Water</i>	1
<i>Mihaela I. Stefan</i>	
1.1 References	4

Chapter 2

<i>UV/Hydrogen peroxide process</i>	7
<i>Mihaela I. Stefan</i>	
2.1 Introduction	7
2.2 Electromagnetic Radiation, Photochemistry Laws and Photochemical Parameters ...	8
2.2.1 Electromagnetic radiation	8
2.2.2 Photochemistry laws	9
2.2.3 Photochemical parameters	11
2.3 UV Radiation Sources	15
2.3.1 Blackbody radiation	15
2.3.2 Mercury vapor-based UV light sources for water treatment	16
2.3.3 Mercury-free UV lamps	21
2.4 UV/H ₂ O ₂ Process Fundamentals	23
2.4.1 Photolysis of hydrogen peroxide	23
2.4.2 Hydroxyl radical	27
2.4.3 Rate constants of [•] OH reactions with organic and inorganic compounds	32

2.5	Kinetic Modeling of UV/H ₂ O ₂ Process	39
2.5.1	<i>Pseudo</i> -steady-state approximation and dynamic kinetic models	40
2.5.2	Computational fluid dynamics models for the UV/H ₂ O ₂ process	46
2.6	Water Quality Impact on UV/H ₂ O ₂ Process Performance	47
2.6.1	pH	48
2.6.2	Temperature	48
2.6.3	Water matrix composition	48
2.7	Performance Metrics for UV Light-Based AOPs	50
2.7.1	Electrical energy per order	50
2.7.2	UV Fluence (UV dose)	52
2.8	UV/H ₂ O ₂ AOP Equipment Design and Implementation	55
2.8.1	UV Reactor design concepts	55
2.8.2	Sizing full-scale UV equipment from bench- and pilot-scale	57
2.8.3	Incorporating the UV light-based processes into water treatment trains	59
2.9	UV/H ₂ O ₂ AOP for Micropollutant Treatment in Water	60
2.9.1	Laboratory-scale research studies	61
2.9.2	Pilot-scale tests	76
2.9.3	Full-scale UV/H ₂ O ₂ AOP installations	82
2.9.4	Process economics, sustainability and life-cycle assessment	88
2.10	Byproduct Formation and Mitigation Strategies	93
2.11	Future Research Needs	99
2.12	Acknowledgments	100
2.13	References	100

Chapter 3

Application of ozone in water and wastewater treatment **123**

Daniel Gerrity, Fernando L. Rosario-Ortiz, and Eric C. Wert

3.1	Introduction	123
3.2	Properties of Ozone	123
3.3	Decomposition of Ozone in Water	124
3.4	Ozonation for Contaminant Removal	126
3.4.1	Overview	126
3.4.2	Direct reactions with ozone	126
3.4.3	Impact of water quality on process performance	129
3.4.4	Summary	138
3.5	Formation of Byproducts	139
3.6	Microbiological Applications	140
3.6.1	Disinfection in drinking water and wastewater applications	140
3.6.2	Microbial surrogates and indicators	141
3.6.3	Ozone dosing frameworks for disinfection	142
3.6.4	Vegetative bacteria	144
3.6.5	Viruses	146
3.6.6	Spore-forming microbes	147
3.7	Implementation at Full Scale Facilities	149
3.7.1	Ozone systems	149

3.7.2	Ozone contactor	149
3.7.3	Mass transfer efficiency	149
3.7.4	Cost estimates	150
3.7.5	Process control	152
3.8	Case Studies and Regulatory Drivers	153
3.8.1	Drinking water applications	153
3.8.2	Wastewater and potable reuse applications	154
3.9	References	156

Chapter 4

Ozone/H₂O₂ and ozone/UV processes **163**

Alexandra Fischbacher, Holger V. Lutze and Torsten C. Schmidt

4.1	Introduction	163
4.2	O ₃ /H ₂ O ₂ (Peroxone) Process Fundamentals	163
4.2.1	Mechanism of hydroxyl radical generation	163
4.2.2	O ₃ and •OH exposures: the R _{ct} concept	165
4.2.3	Reaction kinetics and modeling	167
4.2.4	Water quality impact on process performance: O ₃ and H ₂ O ₂ dose selection criteria	169
4.3	O ₃ /H ₂ O ₂ AOP for Micropollutant Removal	170
4.3.1	Bench-scale research studies	170
4.3.2	Pilot-scale studies	172
4.3.3	Full-scale applications	176
4.3.4	Process economics and limitations	180
4.4	O ₃ /UV Process	182
4.4.1	Process fundamentals	182
4.4.2	Research studies and applications	184
4.5	Byproduct Formation and Mitigation Strategies	185
4.5.1	O ₃ /H ₂ O ₂ process	185
4.5.2	O ₃ /UV process	187
4.6	Disinfection	188
4.7	References	190

Chapter 5

Vacuum UV radiation-driven processes **195**

Tünde Alapi, Krisztina Schrantz, Eszter Arany and Zsuzsanna Kozmér

5.1	Fundamental Principles of Vacuum UV Processes	195
5.1.1	VUV radiation sources for water treatment	195
5.1.2	VUV irradiation of water	201
5.2	Kinetics and Reaction Modeling	206
5.2.1	Reactions and role of primary and secondary formed reactive species	206
5.2.2	Kinetics and mechanistic modeling of VUV AOP	207
5.3	Vacuum UV Radiation for Water Remediation	208

5.3.1	VUV for removal of specific compounds	208
5.3.2	VUV in combination with other treatment technologies	213
5.4	Water Quality Impact on Vacuum UV Process Performance and By-product Formation	215
5.4.1	The effect of inorganic ions	215
5.4.2	The effect of dissolved natural organic matter (NOM)	216
5.4.3	Effect of pH	217
5.4.4	By-product formation during the VUV process and their removal through biological activated carbon filtration	218
5.5	Water Disinfection	219
5.6	Reactor/Equipment Design and Economic Considerations	220
5.6.1	Actinometry for VUV photon flow measurements	220
5.6.2	Reactor design	221
5.6.3	Economics considerations	224
5.7	Applications of Vacuum UV Light Sources	225
5.7.1	Applications in instrumental chemical analysis	225
5.7.2	Ultrapure water production	226
5.8	Vacuum UV AOP – General Conclusions	229
5.9	Acknowledgements	229
5.10	References	230

Chapter 6

Gamma-ray and electron beam-based AOPs **241**

L. Wojnárovits, E. Takács and L. Szabó

6.1	Introduction	241
6.2	Radiolysis as a Universal Tool to Investigate Radical Reactions and as a Process for Large Scale Industrial Technology	242
6.2.1	Techniques in radiation chemistry for establishing reaction mechanisms	242
6.2.2	Sources of ionizing radiation in water treatment	244
6.2.3	G-value, dosimetric quantities, penetration depth	245
6.3	Water Radiolysis	246
6.3.1	Process fundamentals, yields and reactions of reactive intermediates	246
6.3.2	Reactions of primary species with common inorganic ions	253
6.3.3	Kinetics and modeling of ionizing radiation-induced processes	256
6.3.4	Toxicity of ionizing radiation-treated water	258
6.4	Research Studies on Water Radiolysis-Mediated Degradation of Organic Pollutants	259
6.4.1	Aromatic compounds	259
6.4.2	Endocrine disrupting compounds	262
6.4.3	Pesticides	264
6.4.4	Pharmaceutical compounds	266
6.4.5	Organic dyes	274
6.4.6	Naphthalene sulfonic acid derivatives	275
6.5	Ionizing Radiation for Water Treatment: Pilot- and Industrial Scale Applications	276
6.5.1	General considerations	276
6.5.2	Ionizing radiation reactors for water treatment	277

6.5.3	Ionizing radiation for water treatment: pilot studies	279
6.5.4	Industrial scale installations using radiation-based AOP	280
6.5.5	Economics	281
6.6	Conclusions	283
6.7	Acknowledgement	284
6.8	References	284

Chapter 7

Fenton, photo-Fenton and Fenton-like processes 297

Christopher J. Miller, Susan Wadley, and T. David Waite

7.1	Introduction	297
7.2	Types of Fenton Processes	298
7.2.1	Fenton processes	298
7.2.2	Extended Fenton processes	302
7.2.3	Fenton-like processes	307
7.3	Reaction Kinetics and Process Modelling	307
7.4	Applications and Implications	313
7.4.1	Treatment objectives	313
7.4.2	Types of compounds suited to treatment	314
7.4.3	Process advantages	314
7.4.4	Process limitations	315
7.4.5	Laboratory and pilot plant scale studies	316
7.4.6	Commercial applications	319
7.4.7	Equipment design and economic considerations	320
7.4.8	Process integration	321
7.5	Future Research Needs	323
7.6	References	323

Chapter 8

Photocatalysis as an effective advanced oxidation process 333

Suresh C. Pillai, Niall B. McGuinness, Ciara Byrne, Changseok Han, Jacob Lalley, Mallikarjuna Nadagouda, Polycarpos Falaras, Athanassios G. Kontos, Miguel A. Gracia-Pinilla, Kevin O'Shea, Ramalinga V. Mangalaraja, Christophoros Christophoridis, Theodoros Triantis, Anastasia Hiskia, and Dionysios D. Dionysiou

8.1	Introduction	333
8.2	Process Principles Including the Most Recent Scientific Findings and Interpretation	334
8.2.1	Nanotubular titania-based materials for photocatalytic water and air purification	334
8.2.2	Magnetically separable photocatalysts	337
8.2.3	Improving the photocatalytic activity	339
8.3	Classes of Compounds Suitable to Treatment and Examples of Reaction Mechanisms	345
8.4	Kinetic Aspects, Reaction Modelling, Quantitative Structure-Activity Relationship (QSAR)	351

8.5	Water Quality Impact on Process Performance, Practical Considerations on Process Parameter Selection Criteria	356
8.6	Process Limitations and Byproduct Formation; Strategies to Mitigate the Adverse Effects on the Treated Water Quality	358
8.7	Reactor/Equipment Design and Economic Considerations, Figures-of-Merit	362
8.8	Case Studies Relevant to Process Implementation to Water Treatment	363
8.8.1	Contaminated groundwater with 1,4-dioxane and volatile organic solvents, Sarasota, Florida, USA (2013)	364
8.8.2	1,4-Dioxane and VOCs destruction in drinking water, Southern US water district (2013)	364
8.8.3	Removal of chromium (Cr ⁶⁺) in groundwater, Superfund site in Odessa, Texas, USA (2013)	364
8.9	Commercial Applications	365
8.9.1	Global market and standards	365
8.9.2	Drinking water regulations driving the process implementation	365
8.9.3	Commercialization technologies	366
8.9.4	Companies and products	368
8.10	Future Research Needs	368
8.11	Disclaimer	369
8.12	Acknowledgements	370
8.13	References	370

Chapter 9

UV/Chlorine process

383

Joseph De Laat and Mihaela Stefan

9.1	Introduction	383
9.2	Photodecomposition of Free Chlorine by UV Light	384
9.2.1	Distribution of free chlorine species	384
9.2.2	Absorption spectra of free chlorine species in water	384
9.2.3	Radical species, quantum yields and degradation mechanisms of free chlorine	385
9.3	Reactivity and Fate of Chlorine Radicals	396
9.3.1	Equilibria involving the Cl [•] , Cl ₂ ^{•-} and [•] OH species	396
9.3.2	Termination reactions of [•] OH, Cl [•] and Cl ₂ ^{•-} in water	397
9.3.3	Reactivity of Cl [•] and Cl ₂ ^{•-} towards organic and inorganic compounds	398
9.4	UV/Cl ₂ Process for Contaminant Removal from Water	404
9.4.1	Degradation pathways of organic compounds	404
9.4.2	Kinetic modeling of UV/Cl ₂ AOP	407
9.4.3	The impact of selected parameters on UV/Cl ₂ process performance	408
9.4.4	UV/Cl ₂ versus UV/H ₂ O ₂	412
9.4.5	Byproduct formation in the UV/Cl ₂ AOP	420
9.5	Research Needs	423
9.6	Conclusions	423
9.7	Acknowledgement	424
9.8	References	424

Chapter 10***Sulfate radical ion – based AOPs* 429***Nathalie Karpel Vel Leitner*

10.1	Introduction	429
10.2	Methods for Sulfate Radical Generation	429
10.2.1	Mild-thermal and base activation of persulfate	430
10.2.2	Photochemical processes	430
10.2.3	Transition metal-activated decomposition of persulfate salts	431
10.2.4	Miscellaneous processes	432
10.3	Properties and Stability of Sulfate Radical in Pure Water	434
10.3.1	Oxidation-reduction potential	434
10.3.2	pH dependence	435
10.4	Reaction Mechanisms with Organic Molecules in Pure Water	436
10.4.1	Hydrogen-abstraction reactions	437
10.4.2	Electron transfer reactions	438
10.4.3	Addition to unsaturated bonds	441
10.5	Sulfate Radical-Based Treatment of Water Micropollutants	442
10.5.1	Pesticides	444
10.5.2	Pharmaceuticals	444
10.5.3	Algal toxins and taste-and-odor (T&O) causing compounds	444
10.5.4	Volatile organic compounds (VOCs)	445
10.5.5	Perfluorinated compounds	446
10.6	Reactions with Water Matrix Constituents in Sulfate Radical-Driven Oxidations	447
10.6.1	Reactions with inorganic compounds	447
10.6.2	Reactions in natural waters	450
10.7	Commercial Applications	453
10.7.1	Total organic carbon (TOC) analyzers	453
10.7.2	<i>In Situ</i> Chemical Oxidation (ISCO)	453
10.7.3	Other applications	454
10.8	Future Research Needs	454
10.9	Conclusions	455
10.10	Acknowledgements	455
10.11	References	455

Chapter 11***Ultrasound wave-based AOPs* 461***O. A. Larpparisudthi, T. J. Mason and L. Paniwnyk*

11.1	Introduction	461
11.2	Principles of Sonochemistry	461
11.3	Acoustic Cavitation, the Driving Force for Sonochemistry	463
11.3.1	Homogeneous liquid-phase systems	464
11.3.2	Heterogeneous solid surface-liquid systems	465
11.3.3	Heterogeneous particle-liquid systems	466
11.3.4	Heterogeneous liquid-liquid systems	466

11.4	Historical Introduction on the Oxidative Properties of Ultrasound in Water	466
11.5	Sonochemical Decontamination of Aqueous Systems	468
11.5.1	AOP involving ultrasound alone	468
11.5.2	AOP involving ultrasound combined with ozone	473
11.5.3	AOP involving ultrasound combined with ultraviolet light	477
11.5.4	AOP involving ultrasound combined with electrochemistry	479
11.6	Ultrasonic Equipment and Prospects for Scale Up	480
11.7	Conclusions	485
11.8	References	485

Chapter 12

Electrical discharge plasma for water treatment 493

Selma Mededovic Thagard and Bruce R. Locke

12.1	Introduction – Plasma Processes for Water Treatment	493
12.2	Indirect Plasma – Ozone Generation	495
12.3	Direct Plasma – Plasma Directly Contacts Liquid Solution	498
12.3.1	Chemical species formed	500
12.3.2	H ₂ O ₂ generation	501
12.3.3	OH radical generation	502
12.3.4	Data on model compounds	503
12.3.5	Thermal plasma chemistry in direct water discharges	515
12.3.6	Plasma process scale-up	516
12.3.7	Inactivation of biological species	519
12.4	Conclusions	520
12.5	Acknowledgements	521
12.6	References	521

Chapter 13

The role of photochemistry in the transformation of pollutants in surface waters 535

Douglas E. Latch

13.1	Introduction	535
13.2	Solar Radiation at the Earth's Surface	535
13.2.1	The solar spectrum	535
13.2.2	Diurnal, seasonal, and latitudinal variations	536
13.2.3	Light attenuation and depth dependence of photochemical reactions	537
13.3	Types of Photochemical Reactions in Surface Waters	537
13.3.1	Direct photochemistry	537
13.3.2	Indirect photochemistry	540
13.4	Laboratory Methods and Techniques for Studying Pollutant Photochemistry	542
13.5	Photochemically Produced Reactive Intermediates (PPRIs) and the Role of Organic Matter in Indirect Photochemistry	546
13.5.1	Hydroxyl radical ([•] OH)	546
13.5.2	Excited state triplet organic matter (³ OM)	547

13.5.3 Singlet oxygen ($^1\text{O}_2$)	549
13.5.4 Hydrated electron (e_{aq}^-), superoxide radical anion ($\text{O}_2^{\cdot-}$), and hydrogen peroxide	549
13.5.5 Carbonate radical ($\text{CO}_3^{\cdot-}$)	550
13.5.6 Organoperoxyl radicals ($^{\cdot}\text{OOR}$)	550
13.6 Salinity Effects on Photochemical Reactions in Natural Waters	550
13.7 Ranitidine and Cimetidine: An Illustrative Surface Water Photochemistry Example	551
13.8 Select Photochemically Active Aquatic Pollutants	553
13.8.1 Pharmaceuticals	554
13.8.2 Agrochemicals	558
13.8.3 Other photochemically active pollutants detected in surface waters	560
13.9 Notable Examples of Aquatic Pollutants Transformed through Photochemical Reactions	561
13.9.1 Triclosan	561
13.9.2 Steroid hormones and related EDCs	564
13.9.3 Waterborne viruses and similar model pathogens	566
13.10 Future Research Needs	567
13.11 Acknowledgements	567
13.12 References	568

Chapter 14

Advanced treatment for potable water reuse 581

Stuart J. Khan, Troy Walker, Benjamin D. Stanford and Jörg E. Drewes

14.1 Planned Potable Water Reuse	581
14.2 Treatment Objectives and Drivers for the Adoption of AOPs in Potable Reuse	583
14.2.1 Pathogen inactivation	585
14.2.2 Trace chemical contaminants	586
14.3 Validation and Process Control	589
14.4 Process Performance	590
14.5 International Examples of AOP Use in Potable Reuse Projects	592
14.5.1 Groundwater Replenishment System, Orange County, CA, USA (2008)	592
14.5.2 Western Corridor Recycled Water Project, Queensland, Australia (2008)	594
14.5.3 Prairie Waters Project, Aurora, CO, USA (2010)	597
14.5.4 Beaufort West Water Reclamation Plant (South Africa)	598
14.5.5 Terminal Island Water Reclamation Plant, Los Angeles, CA, USA (2016)	598
14.6 Conclusions and Future Projections	601
14.7 References	602

Chapter 15

Advanced treatment for drinking water production 607

Gilbert Galjaard, Bram Martijn, Erik Koreman and Holly Shorney-Darby

15.1 Introduction	607
15.2 UV/H ₂ O ₂ Process: Andijk Water Treatment Plant (WTP) Case Study	608

15.3	Pretreatment Strategies for AOP in Drinking Water Treatment	611
15.3.1	Enhanced coagulation	612
15.3.2	Ion exchange	613
15.3.3	Ceramic membranes and hybrid combinations	618
15.4	The Effect of Pretreatment on MP UV/H ₂ O ₂ AOP	621
15.5	Side Effects of MP UV/H ₂ O ₂ AOP and Mitigation Strategies	623
15.6	References	627

Chapter 16

AOPs for municipal and industrial wastewater treatment	631
<i>Jianlong Wang and Lejin Xu</i>	

16.1	Introduction	631
16.2	Municipal Wastewater Treatment	632
16.3	Industrial Wastewater Treatment	634
16.3.1	Textile wastewater	635
16.3.2	Pharmaceutical wastewater	637
16.3.3	Pesticide wastewater	640
16.3.4	Paper mill wastewater	645
16.3.5	Petrochemical wastewater	648
16.3.6	Landfill leachate	651
16.3.7	Other pollutants	654
16.4	Economic Analysis	658
16.5	Concluding Remarks and Prospects	659
16.6	References	660

Chapter 17

Iron-based green technologies for water remediation	667
<i>Virender K. Sharma and Radek Zboril</i>	

17.1	Introduction	667
17.2	Zerovalent Iron Nanoparticles	668
17.3	Iron(III) Oxide Nanoparticles	669
17.4	Ferrates	670
17.4.1	Disinfection	672
17.4.2	Oxidation	672
17.4.3	Coagulation	675
17.5	Conclusions and Future Outlook	675
17.6	Acknowledgment	676
17.7	References	676

Index	681
