## **Rationale**

The CCIS series is devoted to the publication of proceedings of computer science conferences. Its aim is to efficiently disseminate original research results in informatics in printed and electronic form. While the focus is on publication of peer-reviewed full papers presenting mature work, inclusion of reviewed short papers reporting on work in progress is welcome, too. Besides globally relevant meetings with internationally representative program committees guaranteeing a strict peer-reviewing and paper selection process, conferences run by societies or of high regional or national relevance are also considered for publication.

## **Topics**

The topical scope of CCIS spans the entire spectrum of informatics ranging from foundational topics in the theory of computing to information and communications science and technology and a broad variety of interdisciplinary application fields.

## **Information for Volume Editors and Authors**

Publication in CCIS is free of charge. No royalties are paid, however, we offer registered conference participants temporary free access to the online version of the conference proceedings on SpringerLink (<http://link.springer.com>) by means of an http referrer from the conference website and/or a number of complimentary printed copies, as specified in the official acceptance email of the event.

CCIS proceedings can be published in time for distribution at conferences or as post-proceedings, and delivered in the form of printed books and/or electronically as USBs and/or e-content licenses for accessing proceedings at SpringerLink. Furthermore, CCIS proceedings are included in the CCIS electronic book series hosted in the SpringerLink digital library at <http://link.springer.com/bookseries/7899>. Conferences publishing in CCIS are allowed to use Online Conference Service (OCS) for managing the whole proceedings lifecycle (from submission and reviewing to preparing for publication) free of charge.

## **Publication process**

The language of publication is exclusively English. Authors publishing in CCIS have to sign the Springer CCIS copyright transfer form, however, they are free to use their material published in CCIS for substantially changed, more elaborate subsequent publications elsewhere. For the preparation of the camera-ready papers/files, authors have to strictly adhere to the Springer CCIS Authors' Instructions and are strongly encouraged to use the CCIS LaTeX style files or templates.

## **Abstracting/Indexing**

CCIS is abstracted/indexed in DBLP, Google Scholar, EI-Compendex, Mathematical Reviews, SCImago, Scopus. CCIS volumes are also submitted for the inclusion in ISI Proceedings.

## **How to start**

To start the evaluation of your proposal for inclusion in the CCIS series, please send an e-mail to [ccis@springer.com](mailto:ccis@springer.com).

# Preface

The present book includes extended and revised versions of a set of selected papers from the 17th International Conference on Software Technologies (ICSOFT 2022), held in Lisbon, Portugal, from 11–13 July 2022.

ICSOFT 2022 received 102 paper submissions from 33 countries, of which 10% were included in this book.

The papers were selected by the event chairs and their selection is based on a number of criteria that include the classifications and comments provided by the program committee members, the session chairs' assessment and also the program chairs' global view of all papers included in the technical program. The authors of selected papers were then invited to submit a revised and extended version of their papers having at least 30% innovative material.

The purpose of the International Conference on Software Technologies is to bring together researchers, engineers and practitioners interested in software technologies. The conference areas are “Software Engineering and Systems Development”, “Software Systems and Applications” and “Foundational and Trigger Technologies”.

The papers selected to be included in this book contribute to the understanding of relevant trends of current research on Software Technologies, including: Data Mining and Data Analysis, Empirical Software Engineering, Cybersecurity Technologies, Application Software, Decision Support Systems, Open-Source Development, Quality Management, Software Engineering Tools, Testing and Testability and Data-Driven Software Engineering.

We would like to thank all the authors for their contributions and also the reviewers who have helped to ensure the quality of this publication.
